

5.3 HAZARD RISK RANKING

After the hazards of concern were identified for Town of Blooming Grove, the hazard risks were ranked to describe their probability of occurrence and their impact on population, property (general building stock including critical facilities) and the economy. Each participating jurisdiction may have differing degrees of risk exposure and vulnerability compared to the Town as a whole; therefore each jurisdiction ranked the degree of risk to each hazard as it pertains to their community using the same methodology as applied to the Town-wide ranking. This assures consistency in the overall ranking of risk process. The hazard risk ranking for the Town of Blooming Grove, each participating Village, and the Washingtonville Central School District can be found in their respective jurisdictional annexes in Volume II of this Plan.

HAZARD RISK RANKING METHODOLOGY

The methodology used to rank the hazards of concern for Town of Blooming Grove is described below. Estimates of risk for the County were developed using methodologies promoted by FEMA’s hazard mitigation planning guidance and generated by FEMA’s HAZUS-MH risk assessment tool.

Probability of Occurrence

The probability of occurrence is an estimate of how often a hazard event occurs. A review of historic events assists with this determination. Each hazard of concern is rated in accordance with the numerical ratings and definitions in Table 5.3-1.

Table 5.3-1. Probability of Occurrence Ranking Factors

Rating	Probability	Definition
0	None	Hazard event is not likely to occur.
1	Rare	Hazard event is not likely to occur within 100 years.
2	Occasional	Hazard event is likely to occur within 100 years.
3	Frequent	Hazard event is likely to occur within 25 years.

Impact

The impact of each hazard is considered in three categories: impact on population, impact on property (general building stock including critical facilities), and impact on the economy. Based on documented historic losses and a subjective assessment by the Planning Committee, an impact rating of high, medium, or low is assigned with a corresponding numeric value for each hazard of concern. In addition, a weighting factor is assigned to each impact category: three (3) for population, two (2) for property, and one (1) for economy. This gives the impact on population the greatest weight in evaluating the impact of a hazard.

Table 5.3-2 presents the numerical rating, weighted factor and description for each impact category. The impact rating definitions for population and property are consistent with the New York State Hazard Mitigation Plan (NYS HMP) ranking methodology with minor modifications. Impact to the economy is also being evaluated.

SECTION 5.3: RISK ASSESSMENT - HAZARD RISK RANKING

Table 5.3-2. Numerical Values and Definitions for Impacts on Population, Property and Economy

Category	Weighting Factor	Low Impact (1)	Medium Impact (2)	High Impact (3)
Population*	3	14% or less of your developed land area is exposed to a hazard due to its extent and location	15% to 29% of your developed land area is exposed to a hazard due to its extent and location	30% or more of your developed land area is exposed to a hazard due to its extent and location
Property*	2	Property exposure is 14% or less of the total replacement cost for your community	Property exposure is 15% to 29% of the total replacement for your community	Property exposure is 30% or more of the total replacement cost for your community
Economy	1	Loss estimate is 9% or less of the total replacement cost for your community	Loss estimate is 10% to 19% of the total replacement cost for your community	Loss estimate is 20% or more of the total replacement cost for your community

Note: A numerical value of zero is assigned if there is no impact.

*For the purposes of this exercise, “impacted” means exposed for population and property and loss for economy.

Risk Ranking Value

The risk ranking for each hazard is then calculated by multiplying the numerical value for probability of occurrence by the sum of the numerical values for impact. The equation is as follows: Probability of Occurrence Value (1, 2, or 3) X Impact Value (6 to 18) = Hazard Ranking Value. Based on the total for each hazard, a priority ranking is assigned to each hazard of concern (high, medium, or low).

HAZARD RISK RANKING RESULTS

Using the process described above, the risk ranking for the identified hazards of concern was determined for The Town of Blooming Grove. Based on the combined risk values for probability of occurrence and impact to The Town of Blooming Grove, a priority ranking of “high”, “medium” or “low” risk was assigned. The hazard ranking for The Town of Blooming Grove, from high to low risk, is summarized below:

- Severe Winter Storm
- Flood
- Wildfire
- Severe Storm
- Drought
- Extreme Temperature
- Earthquake

SECTION 5.3: RISK ASSESSMENT - HAZARD RISK RANKING

The following tables present the step-wise process for the ranking. Table 5.3-3 shows the probability ranking assigned for likelihood of occurrence for each hazard.

Table 5.3-3. Probability of Occurrence Ranking for Hazards of Concern for the Town of Blooming Grove Planning Area

Hazard of Concern	Probability	Numeric Value
Drought	Rare	1
Earthquake	Rare	1
Extreme Temperature	Occasional	2
Flood	Frequent	3
Severe Storm	Frequent	3
Severe Winter Storm	Frequent	3
Wildfire	Occasional	2

Table 5.3-4 shows the impact evaluation results for each hazard of concern, including impact on property, structures, and the economy. The weighting factor results and a total impact for each hazard also are summarized.

SECTION 5.3: RISK ASSESSMENT - HAZARD RISK RANKING

Table 5.3-4. Impact Ranking for Hazards of Concern for Town of Blooming Grove

Hazard of Concern	Population			Property			Economy			Total Impact Rating (Population + Property + Economy)
	Impact	Numeric Value	Multiplied by Weighting Factor (3)	Impact	Numeric Value	Multiplied by Weighting Factor (2)	Impact	Numeric Value	Multiplied by Weighting Factor (1)	
Drought	Low	1	3	Low	1	2	Low	1	1	6
Earthquake	Low	1	3	Low	1	2	Low	1	1	6
Extreme Temperature	Low	1	3	Low	1	2	Low	1	1	6
Flood	Low	1	3	High	3	6	Low	1	1	10
Severe Storm	Low	1	3	Low	1	2	Low	1	1	6
Severe Winter Storm	Medium	2	6	High	3	6	Low	1	1	13
Wildfire	Low	1	3	High	3	6	Medium	2	2	11

SECTION 5.3: RISK ASSESSMENT - HAZARD RISK RANKING

Table 5.3-5 presents the total ranking value for each hazard.

Table 5.3-5. Total Risk Ranking Value for Hazards of Concern for Town of Blooming Grove

Hazard of Concern	Probability	Impact	Total = (Probability x Impact)
Drought	1	6	6
Earthquake	1	6	6
Extreme Temperature	2	6	12
Flood	3	10	30
Severe Storm	3	6	18
Severe Winter Storm	3	13	39
Wildfire	2	11	22

Table 5.3-6 presents the hazard ranking category assigned for each hazard of concern. The ranking categories are determined by an evaluation of the total risk ranking score into three categories, low, medium, and high whereby a total score of below 12 is categorized as low, 12 to 22 is medium, and 22 and over is considered a high risk category.

Table 5.3-6. Hazard Ranking Results for Hazards of Concern for Town of Blooming Grove

Hazard of Concern	Ranking Category
Severe Winter Storm	High
Flood	High
Wildfire	High
Severe Storm	Medium
Drought	Medium
Extreme Temperature	Medium
Earthquake	Low

SECTION 5.3: RISK ASSESSMENT - HAZARD RISK RANKING

SUMMARY OF PLANNING AREA RISK RANKING

An overview of the hazard ranking by jurisdiction is provided in Table 5.3-7 below. These rankings have been used as a basis for identifying hazard mitigation strategies included in Section 9 of this plan in conjunction with the results of the hazard vulnerability assessments and input from each jurisdiction.

Table 5.3-7. Hazard Ranking Results for Hazards of Concern for the Town of Blooming Grove Planning Area

Municipality / Jurisdiction	Hazard Ranking						
	Flood	Severe Storm	Severe Winter Storm	Earthquake	Drought	Extreme Temperature	Wildfire
Town of Blooming Grove	H	M	H	L	M	M	H
Village of South Blooming Grove	M	M	H	L	M	M	M
Village of Washingtonville	H	M	H	L	M	M	M
Washingtonville Central School District	M	M	H	L	M	M	M

HAZARDS PROFILES AND VULNERABILITY ASSESSMENT

The following sections profile and assess vulnerability for each hazard of concern. For each hazard, the profile includes: the hazard description; its location and extent; previous occurrences and losses; and the probability of future events. The vulnerability assessment for each hazard includes: an overview of vulnerability; the data and methodology used; the impact on life, health and safety; impact on general building stock; impact on critical facilities; impact on the economy; additional data needs and next steps; and the overall vulnerability assessment finding. Hazards are presented as listed above, starting with the flood hazard and ending with the extreme temperature.
